▶ C&K'S SILICONE SEALING BOOTS

For use in harsh environments C&K Components has developed new silicone rubber sealing boots for its 7000 Series miniature, 9000 Series power and military-qualified toggle switches. The new silicone rubber boots are used to seal the toggle switches to protect against contaminants such as salt water, lubricants, cleaning solvents, dust, dirt and grease. Made from silicone, the rubber boots feature a high tear strength along with a wide operating temperature range. They are available in full- and half-boot versions to fit all 15/32-inch bushings, as well as a full boot to fit all 1/4-inch bushings. Typical pricing for the silicone sealing boots for the 7000 Series, 9000 Series and military-qualified toggle switches ranges from \$1.00-\$1.50 depending on model and quantity.

▼ METCAR'S 100 AND 300 SERIES BEARING ASSEMBLIES

Designed for fast bearing cartridge replacement Metallized Carbon Corp.'s 100 and 300 Series self-aligning Bearing Assemblies are designed to hold the powered rollers in large continuous dryers that are used for curing gypsum board and ceiling tile. The 100 Series bearing assemblies are designed to enable fast bearing cartridge replacement from the axial direction. The 300 Series bearing assemblies are designed to enable fast bearing cartridge replacement from the radial direction. Both bearing cartridges are available with four different grades of Metcar®, self-lubricating carbon-graphite material.

size:
3 x 3 x 1.1 mm

- I²C Digital Interface
- Fully Calibrated
- Excellent Performance & Reliability

Specifications	
Range RH	0% to 100%
Range T	-40°C to +120°C
Accuracies RH/T	typ. ± 2% RH / ± 0.3°C
Assembly	SMD reflow solderable
Consumption	typ. 3 µW
